1) Taurine (common in energy drinks)
Helps regulate water and mineral balance in the body.
Supports cardiovascular function.
Enhances exercise performance by reducing fatigue.
Has antioxidant and detoxifying properties.

2) Sugar (present in soft drinks, juices, energy drinks)
Provides quick energy as it is rapidly absorbed into the bloodstream.
Improves taste and palatability of beverages.
Helps restore glycogen levels after intense exercise.

3) Caffeine (in coffee, tea, energy drinks, cola)

Acts as a central nervous system stimulant.
Improves alertness, concentration, and reaction time.

Enhances physical endurance by reducing perceived effort.
May improve metabolic rate and fat oxidation.

4) Quinine (found in tonic water)
Traditionally used as an anti-malarial compound.
Provides a bitter taste, balancing sweetness in beverages.
In small amounts, may have mild muscle relaxant effects.

5) Saccharine (artificial sweetener in diet beverages)

Provides sweetness without calories.
Suitable for diabetic patients as it doesn't raise blood glucose levels.
Helps in weight management when used as a sugar substitute.

6) L-Theanine (present in tea, esp. green tea)
Promotes relaxation without drowsiness.
Enhances focus and attention when combined with caffeine.
May reduce stress and anxiety.
Improves sleep quality indirectly.

7) Ginseng (in herbal teas, energy drinks, tonics)
Boosts energy and reduces fatigue.
Improves cognitive performance and memory.
Supports immune function.

May have adaptogenic properties, helping the body manage stress.

8) Resveratrol in Wine (especially red wine)
Powerful antioxidant found in grape skins.
Supports cardiovascular health by improving blood flow.
May reduce inflammation and oxidative stress.
Linked with anti-aging effects and protection against certain chronic diseases.

9) Antioxidants (present in tea, coffee, fruit juices, wine)
Neutralize harmful free radicals.
Protect cells from oxidative damage.
Support overall immune health.

May lower risk of chronic diseases such as cancer, diabetes, and heart disease.

10) Catechin in Green Tea
A type of antioxidant (flavonoid).
Supports weight loss by boosting metabolism and fat oxidation.
Improves cardiovascular health by lowering LDL cholesterol.
Enhances brain function and protects against neurodegenerative diseases.
Provides anti-inflammatory and anti-cancer properties.
